D'ANDREA®
THE ART OF PRECISION

PRECISION IS OUR STRENGTH

D'ANDREA S.p.A. is an Italian company, world leader in the production of high precision accessories for machine tools. D'Andrea was founded in 1951 by Marino D'Andrea, who started the business with the industry's first facing and boring head. The D'Andrea brand is recognized worldwide, through a dealer network in over 50 countries, for the quality and reliability of its products.

D'Andrea Marino
The Founder

1951 - The first Head
for Boring and Facing

Ermanno with his sons Amedeo
and Marino and daughter Maria Pina.

A tradition of more than 70 years in the manufacturing sector and a great passion for mechanics that is now inherited by the third generation, with the aim of responding to the increasingly demanding requests from the world of precision mechanics. Every year significant resources are invested in Research and Development of new products that satisfy a highly qualified demand through advanced technological solutions.

Lainate (Milan)

D'Andrea S.p.A. represents the headquarters of the group, based in Lainate, a few kilometers from Milan. With over 7.000 sqm, D'Andrea boasts a modern, functioning and efficient plant where several machine tools are involved in the production of Tools and Heads. In particular, the grinding operations as well as the final test and assembly are here carried out.

Castel Del Giudice (Isernia)

D'Andrea Molise was founded in 2001 in Castel Del Giudice (Isernia), where Marino - the founder, was born. In this plant, most of the semi-finished products are made and, subsequently, finished, mounted and tested in the headquarters.

High-precision modular toolholders that are produced for boring, milling and drilling operations with extreme flexibility and rigidity.

The MHD' coupling is the heart of the Modulhard'andrea tool system. Available in 8 sizes, it guarantees the interchangeability of all the elements of the system, which includes arbors, extensions, reductions and toolholder adapters.

MHD' EXTENSIONS - REDUCTIONS - VIBRATION-DAMPING

PR EXTENSIONS

For each MHD size there are extensions of different lengths that can be used to achieve the desired machining depths.

RD REDUCTIONS

The reductions allow the use of MHD components of a smaller size thereby optimising the composition of the tool according to the overall dimensions.

BORING

TS 16 ~ 80 \varnothing 18 ~ 250

Simple and extremely rigid roughing heads, thanks to the serrated surfaces between the head body and the bit holders. The constant distance between the bit holder clamping screw and the cutting edge guarantees the stability of the system.

- 1. Body
- 2. Setting screws
- 3. Expanding pin
- 4. Coolant outlets
Max BAR 40
- 5. Bit holders
- 6. Tools clamp screws

USE TS for ROUGHING end SEMI-FINISHING operations

Cutting edges might be adjusted on a pre-setting bench and TS heads can be used in three different configurations, with a single cutting edge (**pic. 3**) or misaligned ones (**pic.2**) half the feed.

pic.1 with two SSCC bit holders aligned and on the same diameter for roughing operations with high feedrate.

pic. 2 with one SSCC bit holder and one SMCC bit holder staggered and on a different diameter for roughing operations with high depth of cut.

pic.3 with a single bit holder for roughing or semi-finishing operations.

Offering of high-precision monolithic and modular tool holders to perform various different operations on machine-tools.

The strong point of the **PSC** system is the ISO 26623 polygonal-conical connection which guarantees extreme rigidity even in the most demanding process.

The system allows the use of the entire **MHD'** line.

PSC COUPLING ISO 26623-1/2

PSC	S 	N·m
40	8	55
50	10	95
63-80	14	170

The **PSC coupling**, compliant with the ISO 26623 standard, is available in four sizes.

The system is complete with arbors, extensions, reductions, adapters, roughing and finishing heads. The range includes ER collet chucks and MONOFORCE power chucks.

PSC - TS complete line of double-bit boring heads for roughing from \varnothing 68 mm to \varnothing 200 mm.

PSC - TRM complete line of micrometric heads for finishing from \varnothing 2.5 mm to \varnothing 220 mm.

ARBORS, manufactured in 4 different sizes **PSC 40-50-63 and 80**, are made of case-hardened, tempered and subsequently ground steel.

PSC - PR e RD for each size of PSC, extensions and reductions are available in different lengths which allow to achieve the required working depths.

MONOFORCE line of high precision power milling chucks ideal for machining where precision and high clamping forces for the cutting tool are required.

PSC - ER collet holders made for the use of ER standard collets.

PF adapters for side and face milling cutters.

PSC - MHD' adapters to integrate the entire MHD' system boring line into the PSC program.

PSC - PR

On request supplied with coolant tube **PSC**. See p.57

PSC - TS $\varnothing 68 \sim 200$

Simple and extremely rigid roughing heads, thanks to the serrated surfaces between the head body and the bit holders. The constant distance between the bit holder clamping screw and the cutting edge guarantees the stability of the system.

1. PSC 50 - 63 - 80
2. Setting screws
3. Coolant outlets **Max BAR 40**
4. Bit holders
5. Tools clamp screws

On request supplied with coolant tube **PSC**. See p.57

USE TS for ROUGHING and SEMI-FINISHING operations.

Cutting edges can be adjusted on a pre-setter and these TS heads can be used in three different configurations, a balanced setup, with a single cutting edge (**pic.3**) or staggered inserts (**pic.2**) half the feed.

pic.1 with two SSCC bit holders aligned and on the same diameter for roughing operations with high feedrate.

pic.2 with one SSCC bit holder and one SMCC bit holder staggered and on a different diameter for roughing operations with high depth of cut.

pic.3 with a single bit holder for roughing or semi-finishing operations.

PSC - TCD'

TURNING TOOLHOLDERS

TCD' is the turning tools offering made according to the ISO 26623-1 **PSC** standards for Application on MULTI-TASK machines. The **TCD'** line is offered with coolant through channels.

PSC - TU ISO 26623-1

Right hand tool holder shown. A standard Application requires left hand tools with right hand adapters.

CROSS BARS

ROUGHING

FINISHING - TURNING

2 μ m

**COUPLING
HT[®]**

**COUPLING
HT[®]**

The new **BHT** boring system is characterized by the new **HT** standard base connection which ensures perfect coupling and high resistance to torsion.

The **BHT** bars cover a working range from \varnothing 250 to \varnothing 1000 mm, both in roughing and finishing.

The wide range of accessories includes adjustable ISO-CA roughing cartridges and a TRM 63 STANDARD micrometric finishing head, capable of carrying out boring, chamfering and back-boring operations.

The FINISHING configuration system can be balanced with the addition of counterweights.

BODY

BACKWARD FOR roughing operations USE TS 63/63 +SSQC 63 see page 24

COUPLING HT®

1. The HT system is suitable for medium-heavy machining, characterized by **high torsional components** with maximum concentricity.
2. The guarantee the total **absence of play**, thanks to the pulling force exerted by the central tie rod.
3. The new HT system has significantly reduced dimensions.
4. It facilitates the axial coolant channels.
5. The arbors are made with hardness HRc 55-60.

CALCULATION FORMULAS FOR BORING

Vc cutting speed (m/min.)
 D diameter of workpiece (mm)
 n number of revolutions / min' (rev./min)
 Vf feed rate (mm/min.)
 fn feed / rev. (mm/rev)
 π 3.14

$$Vc = \frac{\pi \cdot D \cdot n}{1000}$$

$$n = \frac{Vc \cdot 1000}{\pi \cdot D}$$

$$Vf = n \cdot fn$$

MONOd'

MONOLITHIC TOOLHOLDERS

MONOd' monolithic collet chuck holders are manufactured according to ISO Standards in DIN 69871, MAS 403 BT and DIN 69893 HSK machine tools.

High quality production guarantees a high level of precision. All ER toolholders are balanced to class G 6.3 at 15,000 rpm.

U-TRONIC

Medium and large Numerical Control heads, applicable on boring machines, machining centers and special machines. These offer the capabilities of different and additional machining operations, both internal and external. The slide movement is managed by an integrated servomotor and directly connected to the NC. The application on machines could be manual or automatic thanks to an interface flange.

DOUBLE SLIDE

HIGH SPEED (BALANCED)

SPECIALS

U-TRONIC

COMMAND

The control of the U-TRONIC heads takes place through the direct connection to the "U" axis of the machine numerical control. Through the interpolation of the axes, it offers the capabilities to perform any type of turning, boring, radiusing and spherical operations.

COMPONENTS

1. Stationary body
2. Rotating body
3. Tool slide
4. Gears
5. Bearings
6. Coolant way
7. Servomotor
8. Limit switches
9. Flange
10. Encoder on request

PREARRANGEMENTS

A-Internal pressurization pic.1

To prevent liquid and dust from getting into the motor, transducer, and limit switch areas, an $\varnothing 8,5$ (A) hole is provided for internal pressurization of the fixed body with an air inlet at **0.5-1 BAR**.

B-Automatic greaser pic.1

A $\varnothing 8,5$ (B) hole is provided on the head so that grease can be automatically put in the U-TRONIC.

Coolant supply pic.1-2

Internal coolant channels (W) are provided inside the U-TRONIC head that allow coolants to pass through from the machine spindle until the two threaded holes located next to the slide (W). Hoses can be screwed on these holes to bring coolant directly to the tool. **Max pressure BAR 40**.

Balancing pic.3

To improve working conditions and balance the tool position when it appears shifted in relation to the U-TRONIC axis, counterweights (1) can be applied using the threaded holes (2) located on the rotating body.

APPLICATION

U-TRONIC is applied manually or automatically by using a flange for fastening to the machine tool and a driving plate for the rotary body rotation.

It is applied manually using a flange for fastening with a cam lock quick coupling, or automatically with a palletized system and special connectors.

The following layout shows the basic information for the flange manufacturing with cam lock rapid coupling.

The U-TRONIC UT 8-800 S and UT 8-1000 S do not include the fastening with a cam lock quick coupling.

U-TRONIC

CHIP REMOVAL CAPACITY

The chip removal rates are indicative for normal working conditions on steels with hardness in the range of 160-200 HB, (average $K_s = 2000 \text{ N/mm}^2$) recommended $V_t 120/160 \text{ m/min}$.

The optimal values and working times must be determined with trials.

TA-CENTER 2 TA-C2

TA-CENTER 2 Boring and facing heads uniquely designed for machines with automatic tool changers and applicable on all machining centers. The toolholder slide movement is managed by an external U-DRIVE unit attached to the spindle flange.

TA-CENTER 2

TA-C2

COMMAND

CNC

The TA-CENTER 2 boring and facing heads are designed to be used on machines with automatic tool changers, therefore essentially on all machining centers.

The control of the feed, the tool-holder slide and the tool position, also during rotation, are controlled by a **U-DRIVE** gearbox unit. This group is managed directly by a U-axis of the numerical control of the machining center. A machining center set up in this way offers several additional and different operations including internal and external turning, grooves, taper bores, concave and convex radius machining, cylindrical and conical threads and facing for serration.

TA-C2

U-DRIVE

COMPONENTS U-DRIVE

1. Base element
2. Servomotor
3. Mechanical unit for automatic hook-up to the TA-CENTER 2 drive
4. The unit comes with air inlet connection for cleaning the drive
5. Manual lubrication
6. n°6 M5x8 holes to be used for securing a possible protective casing

PREARRANGEMENTS

pic.1

Coolant supply pic.1

Coolant exits from the two adjustable nozzles in the TA-C2 located next to the slide after crossing the taper and the rotating body of the head. This noteworthy advantage ensures longer duration of the cutting edge, quicker cutting speed and for obtaining good surface finishes. The centralized supply of coolant does not harm the TA-C2 of which the internal labyrinth protected by an O-ring. It is advisable to not exceed **50 BAR** of pressure.

pic.2

Balancing pic.2

TA-CENTER heads are designed with two counterweights **(5)** for automatic balancing, that move opposite to the slide **(3)** allowing to machine at a higher number of rpm without noticeable oscillations.

MACHINING

The chip removal rates are indicative for normal working conditions on steels with hardness in the range of 160-200 HB, (average $K_s = 2000 \text{ N/mm}^2$) recommended V_t 120/160 m/min.

The optimal values and working times must be determined with trials.

TA-TRONIC 2 TA-T2

TA-TRONIC 2 Boring and facing heads designed to be applied manually on small boring machines, machining centers and special machines. The integrated servomotor, connected to the CN, manages the toolholder slide movement. The stationary body is held in position by a flange or, for light operations, by a simple anti-rotation pin.

COMMAND

The control of the TA-T2 heads takes place through the direct connection to the "U" axis of the numerical control of the machine tool that allows boring, internal, external and back facing, internal and external turning, grooves, facing for serration, threads and taper bores, as well as concave and convex radius machining through interpolation with the other axes.

Coolant supply pic.1

In the TA-T2, coolant exits from the two adjustable nozzles located next to the slide after crossing the taper and the rotating body of the head. This noteworthy advantage ensures longer duration of the cutting edge, quicker

cutting speed and for obtaining good surface finishes. The centralized supply of coolant does not harm the TA-T2 of which the internal labyrinth protected by an O-ring. It is advisable not to exceed **50 BAR** of pressure.

PREARRANGEMENTS

Balancing pic.2

TA-TRONIC heads are designed with two counter-weights (5) for automatic balancing, that move opposite to the slide (3) allowing to machine at a higher number of rpms without noticeable oscillations.

AUTORADIAL

AUTORADIAL Automatic facing heads that can be applied on machining centers and on NC machines without the need for an electronic interface or interlock. They perform automatic working cycle without ever stopping the rotation of the spindle. Particularly suitable for machining of seats for elastic rings, facing for serration and creating “phonographic” spirals.

CHIP REMOVAL CAPACITY - MAX ROTATION SPEED

The chip removal rates are indicative for normal working conditions on steels with hardness in the range of 160-200 HB, (average Ks = 2000 N/mm²) recommended Vt 120/160 m/min.

The optimal values and working times must be determined with trials.

TA-SENSITIV 2 TA-S2

FACING AND BORING HEADS

TA-SENSITIV 2 - Boring and facing heads, applicable for milling machines, boring mills and radial drills with the possibility of manual adjustments during **machine stops** and automatic feeds during the revolution of the machine spindle.

It's possible to carry out external and internal facing operations, backward operations, cylindrical and conical borings, internal and external grooves, turning and chamfers.

The arbor is interchangeable and, thanks to the MHD' coupling, it allows the use of all available arbors from the MHD' modular system.

TA-S2.120 max Ø 250 **TA-S2.170** max Ø 400

APPLICATION

The TA-S2 heads can be applied to the machine tools through the driving arbor (1) and an anti-rotation stop block (2). For heavy machining it is recommended to apply a flange.
